1 rates

The **label** of a Stock Item contains important data that is useful not only in the internal organization of a company (e.g. Inventory Balance) but in informing the Trading Parties as well (e.g. a Customer) for a specific stock item (e.g. price, discount, item variations).

The **Labels document** is a Soft1 Stock Items document (Commercial Management > Stock Management > Stock Documents), which gathers all the stock items whose labels should be printed, e.g. new arrivals, discount periods, etc.

For further information, watch the following video or read the [Labels document](#).
